M91[™]

An affordable All-in-One: a smart PLC with a textual HMI and keyboard, plus an onboard I/O configuration; expand up to 150 I/Os

Features:

HMI

- Up to 80 user-designed screens
- Multilingual: supports over 15 languages and 20 graphic symbols
- Scroll between pre-programmed recipes/menus
- Memory and communication monitoring via HMI - No PC needed

PLC

- · Shaft-encoder inputs and PWM outputs
- · Direct temperature inputs
- · Auto-tune PID, up to 4 loops
- Date & Time-based control
- Database
- Print utilities
- Full source upload

Communication

- SMS messaging via GSM
- Remote access utilities
- PC access via MODBUS or OPC server
- Supports MODBUS protocol
- CANBus (in C models only)
- User-defined ASCII strings, enable communication with external devices
- RS232/RS485 built-in port

¹ In these models certain inputs are adaptable, and can function as either digital, analog, and in certain models also as thermocouple or PT100. Using adaptable inputs reduces the amount of free digital inputs. For example, M91-2-UA2 offers 12 digital inputs. Implementing 2 TC inputs requires 4 digital inputs, leaving 8 free.

 $^{^{\}rm 2}$ Certain inputs can function as high-speed counters, shaft-encoder inputs, or normal digital inputs.

³ This specification depends on cable length.

 $^{^{\}rm 4}$ Certain outputs can function as high-speed or PWM outputs.

I/O Expansion Modules

C€/UL

Expand your system with local or remote I/O expansion modules.

Vision series support both local & remote I/O modules. M91 supports local modules only.

I/O Expansion Module Adapters

EX-A2X¹

al I/O module adapter. Galvanic isolation. Up to 8 modules by be connected to a single PLC¹. Supports both 12/24 VDC
EX-RC1 ^{1,5}
Remote I/O module adapter via CANhus

Connect multiple adapters to a single PLC; connect up to 8 modules per adapter. Supports both 12/24 VDC.

- ¹ Number of supported I/Os & I/O modules varies according to PLC model.
- ² The EXF-RC15 functions as a CANbus node in a Vision UniCAN network. The EXF-RC15 is stand-alone and does not support I/O Expansion Modules.
- ³ The EX90 is housed in an open casing. Only one EX90 can be connected per PLC, as a single expansion module; Expansion adapter not required.
- ⁴ 10-LCx models are supported by the M91 & Vision series. Not supported by the M90 series.
- ⁵ Supported by Vision series. Not supported by M91 series.

Functions as both I/O module and adapter*

91-2-R34 Art. No. 1%/(+&'
24 VDC, 22 pnp/npn digital inputs, including 2 analog inputs¹ and 3 high-speed counter/shaft encoder inputs, 12 relay outputs, I/O expansion port, RS232/RS485 port

Power supply	24VDC
Permissible range	20.4VDC to 28.8VDC with less
	than 10% ripple
Maximum current consumption	240mA@24VDC
Digital inputs	22 pnp (source) or npn (sink)
-	inputs. See Notes 1 and 2.
Nominal input voltage	24VDC. See Note 3.
Input voltages for pnp (source):	0-5VDC for Logic '0'
,	17-28.8VDC for Logic '1'
Input voltages for npn (sink):	17-28.8VDC/<1mA for Logic '0'
,	0-5VDC/>3mA for Logic '1'
Input current	3.7mA@24VDC
Input impedance	6.5ΚΩ
Response time	10mS typical
(except high-speed inputs)	
Galvanic isolation	None
Input cable length	Up to 100 meters, unshielded
	,
High-speed counter	Specifications below apply when
3	inputs are wired for use as a high-
	speed counter input/shaft
	encoder. See Notes 4 and 5.
Resolution	16-bit
Input freq.	10kHz max.
Minimum pulse	40us
	16-

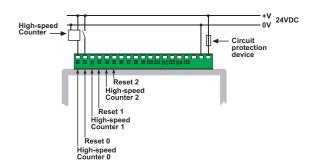

Power supply, pnp (source) inputs

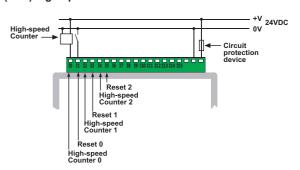

npn (sink) inputs

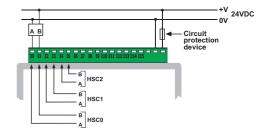

pnp (source) high-speed counter

npn (sink) high-speed counter

Shaft encoder

Notes:

- 1. The total number of inputs is 22. All of these may be used as normal digital inputs. Via jumper settings and wiring, certain of these inputs may be adapted to analog inputs.
- 2. All 22 inputs can be set to pnp (source) or npn (sink) via a single jumper and appropriate wiring.
- 3. npn (sink) inputs use voltage supplied from the controller's power supply.
- 4. Inputs #0, #2 and #4 can each function as either high-speed counter or as part of a shaft encoder. In each case, high-speed input specifications apply. When used as a normal digital input, normal input specifications apply.
- 5. Inputs #1, #3 and #5 can each function as either counter reset, or as a normal digital input; in either case, specifications are those of a normal digital input. These inputs may also be used as part of a shaft encoder. In this case, high-speed input specifications apply.
- 6. To avoid electromagnetic interference, mount the controller in a metal panel/cabinet and earth the power supply. Earth the power supply signal to the metal using a wire whose length does not exceed 10cm. If your conditions do not permit this, do not earth the power supply.

Warnings

- Unused pins should not be connected. Ignoring this directive may damage the controller.
- Improper use of this product may severely damage the controller.
- Refer to the controller's User Guide regarding wiring considerations.
- Before using this product, it is the responsibility of the user to read the product's User Guide and all accompanying documentation. Spectra (Schweiz) AG

info@spectra.ch

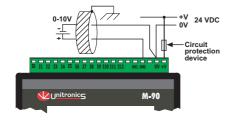

Analog Inputs	Two 10-bit, multi-range inputs:		
	0-10V, 0-20mA, 4-20mA		
	See Note 1 on page 1		
Conversion method	Successive approximation		
Input impedance	>150KΩ for voltage		
	243Ω for current		
Galvanic isolation	None		
Resolution (except 4-20mA)	10-bit (1024 units)		
Resolution at 4-20mA	204 to 1023 (820 units)		
Conversion time	Synchronized to scan time		
Absolute max. rating	±15V/30mA		
Full scale error	± 2 LSB		
Linearity error	± 2 LSB		
Status indication	Yes, See Note		

Note

The analog value can also indicate when the input is functioning out of range. If an analog input deviates above the permissible range, its value will be 1024.

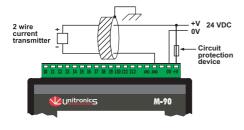

Voltage connection

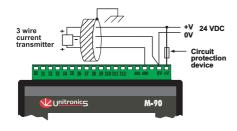

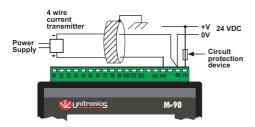

Notes:

- a. Shields should be connected at the signals' source.
- b. The 0V signal of the analog input must be connected to the controller's 0V.

Current connections

Notes:

- a. Shields should be connected at the signals' source.
- b. The 0V signal of the analog input must be connected to the controller's 0V.

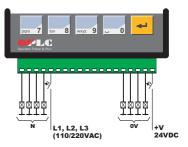

Relay outputs	12 relay (in 3 groups) See Note
Output type	SPST-NO (Form A)
Type of relay	Tyco PCN-124D3MHZ
	or compatible
Isolation	by relay
Output current (resistive load)	3A max per output
	8A max total for common
Rate voltage	250VAC / 30VDC
Minimum load	1mA@5VDC
Life expectancy	100k operations at maximum load
Response time	10mS (typical)
Contact protection	External precautions required (see below)

Note

Outputs #0, #1, #2 and #3 share a common signal. Outputs #4, #5, #6 and #7 share a common signal. Outputs #8, #9, #10 and #11 share a common signal.

Relay Outputs

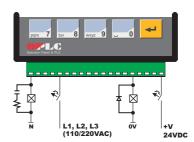

- Each Output can be wired separately to either AC or DC as shown below.
- The 0V signal of the relay outputs is isolated from the controller's 0V signal.

Increasing Contact Life Span

To increase the life span of the relay output contacts and protect the device from potential damage by reverse EMF. connect:

- a clamping diode in parallel to each inductive DC load.
- an RC snubber circuit in parallel with each inductive AC load.

	Nodes	Up to 32

Note: RS232/RS485 is determined by jumper settings and wiring, as described in the document "M91 RS485 Port Settings" packaged with the controller.

I/O expansion port	Up to 64 additional I/Os, including digital & analog I/Os, RTD & more.
	digital & arialog 1/Os, KTD & Hore.
Miscellaneous	
Clock (RTC)	Real-time clock functions (Date and Time).
Battery back-up	7 years typical battery back-up for RTC and system data.
Weight	310g (10.9 oz.)
Operational temperature	0 to 50°C (32 to 122°F)
Storage temperature	-20 to 60°C (-4 to 140°F)
Relative Humidity (RH)	5% to 95% (non-condensing)
Mounting method	DIN-rail mounted (IP20/NEMA1)
	Panel mounted (IP65/NEMA4X)

91-2-R34 Jumper Settings

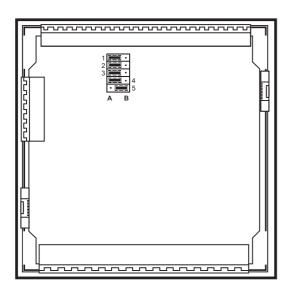

The tables below show how to set a specific jumper to change the functionality of the controller. To open the controller and access the jumpers, refer to the directions at the end of these specifications.

Incompatible jumper settings and wiring connections may severely damage the controller.

Jumper #		NPN	PNP*
Digital Inputs	JP3	А	В

	Jumper#	Voltage	Current	Digital*
A 1 4 / 144	JP1	А	А	В
Analog 1 / I14	JP4	А	В	В
A I O / IAF	JP2	А	А	В
Analog 0 / I15	JP5	А	В	В

^{*}Default factory setting

In this figure, the jumper settings will cause the controller to function as follows:

Digital inputs: npn, 24VDC inputs Analog input 1: Voltage input Analog input 0: Current input
