## About UniStream® Remote I/O

This line of remote Ethernet I/O is compatible with UniStream controllers. The line comprises an Ethernet-based Remote I/O adapter and I/O Remote modules.

You configure Remote I/Os in UniLogic, using the Hardware Configuration editor, and connect them to the controller via Ethernet cable

A single UniStream Remote I/O adapter can support up to 63 12mm wide I/O modules. Each adapter comprises two Ethernet ports; this enables users to link an adapter to a controller, and then daisy-chain adapters to support up to 8 adapters per controller, increasing the total number of I/Os supported by a single UniStream.

UniStream Remote I/O offer a broad range of modules; each module offers a different configuration of analog and digital outputs.

Note that the exact number of I/Os that can be included per adapter is dependent on the specific I/O connected to that specific adapter.

The adapter is limited to process 192 data bytes for inputs and 192 data bytes for outputs.

Each digital input/output point process data is 1 bit (minimum 1 byte per module if module data size is less than 8 points) while each analog input/output is 2 bytes (8 inputs/outputs module will be 16 bytes of process data).

### UniStream Remote I/O and Uni-I/O modules

You may use both lines in the same application at the same time.

Since the two lines communicate via different protocols and physical connections:

- They work independently of each other
- You can use both lines with the same controller at the same time.

Note that the adapters and modules of each line are **not** interchangeable.

You may only use:

- Uni-Local Expansion Adapters with Uni-I/O modules
- UniStream Remote I/O Adapters with UniStream Remote I/O modules.

# URB-TCP (URB-TCP) – UniStream Remote IO Ethernet Adapter

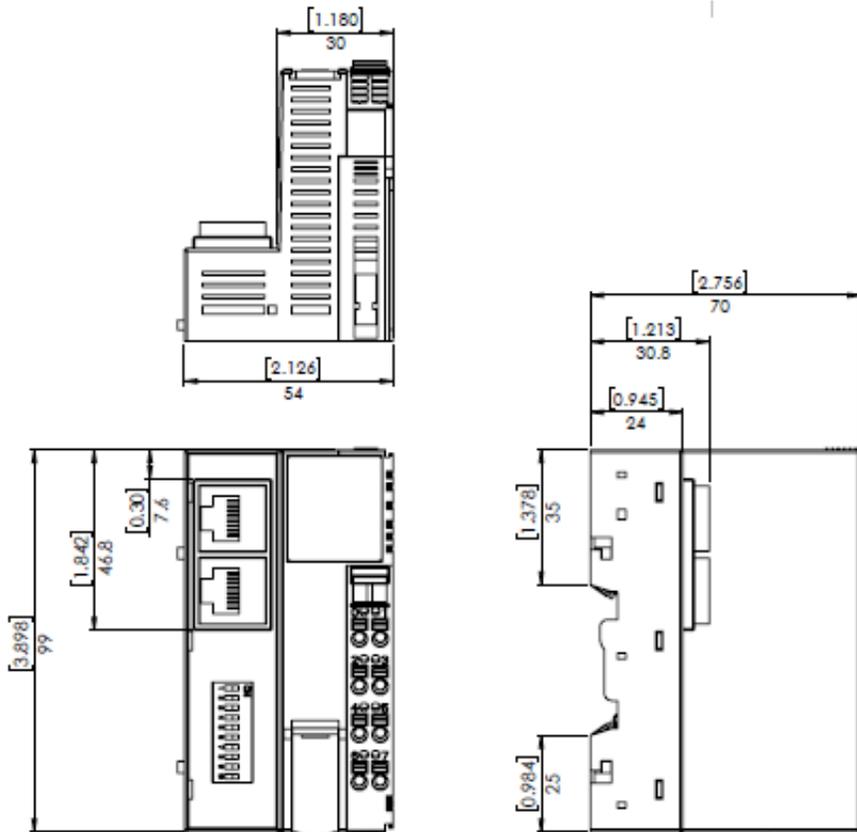

## General restrictions

- All examples and diagrams are intended to aid understanding, and do not guarantee operation. Unitronics accepts no responsibility for actual use of this product based on these examples.
- Please dispose of this product according to local and national standards and regulations.
- This product should be installed only by qualified personnel.

## Environmental Considerations

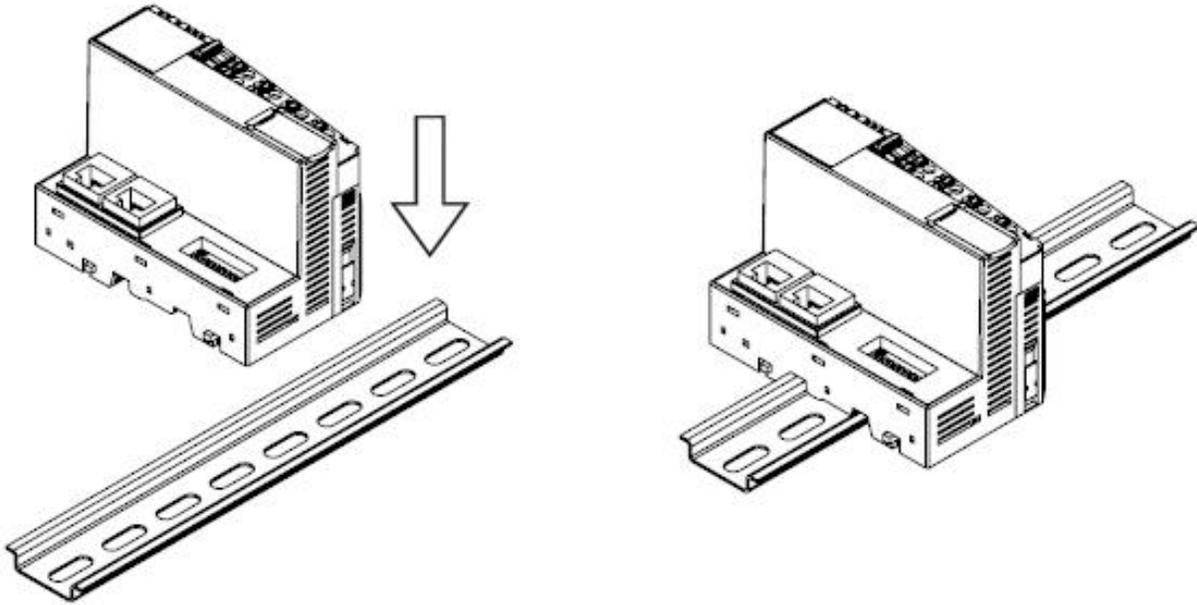

- Do not install in areas with: excessive or conductive dust, corrosive or flammable gas, moisture or rain, excessive heat, regular impact shocks or excessive vibration, in accordance with the standards and limitations given in the product's technical specification sheet.
- Do not place in water or let water leak onto the unit.
- Do not allow debris to fall inside the unit during installation.
- Install at maximum distance from high-voltage cables and power equipment.

## Dimensions

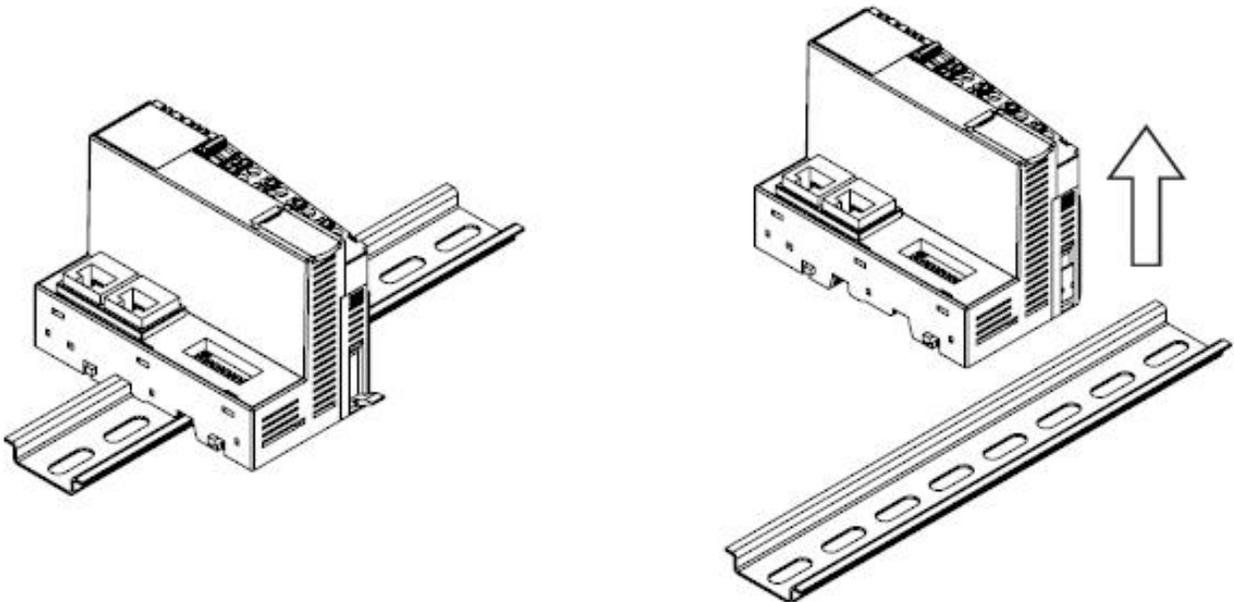

## Installation - DIN-Rail Module Mounting

1. Press down the module lightly on the DIN rail until the lower ridge click onto the rail.

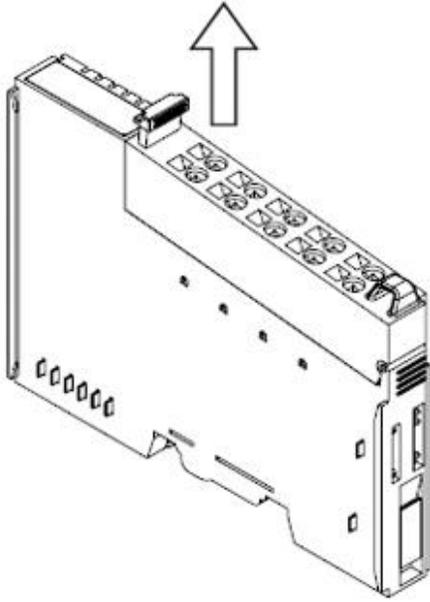

## How to Remove the Adapter Module from the DIN-Rail

1. Pull the white locking latch.
2. Pull the module off the rail.

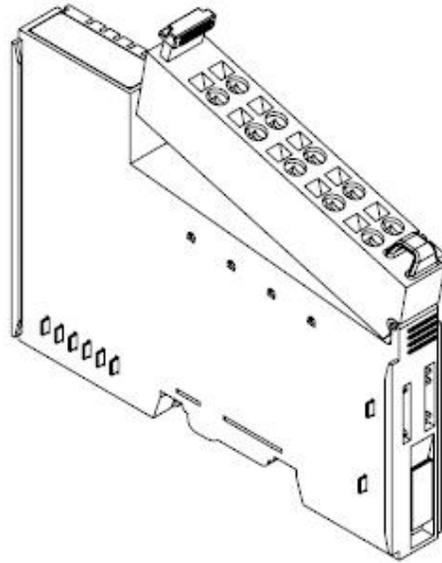

## How to remove the RTB (Removable Terminal Block) from the I/O module

1. Pull out the plastic belt from the RTB.

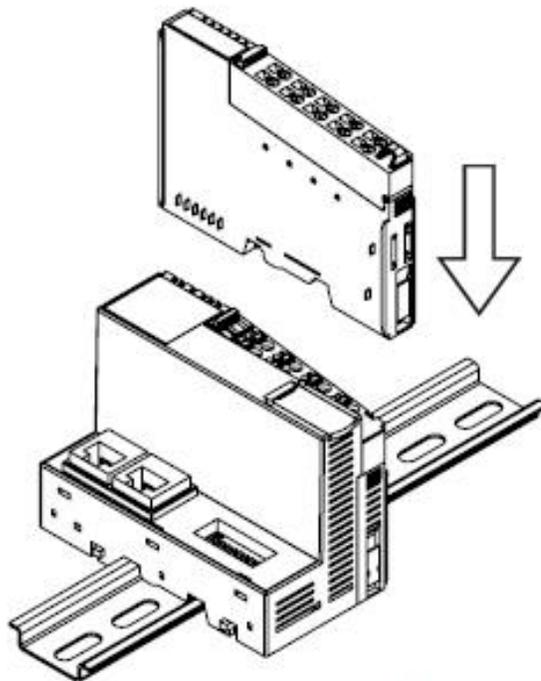

2. Apply more force until the I/O module is pulled away from the I/O module.

## How to connect the I/O modules

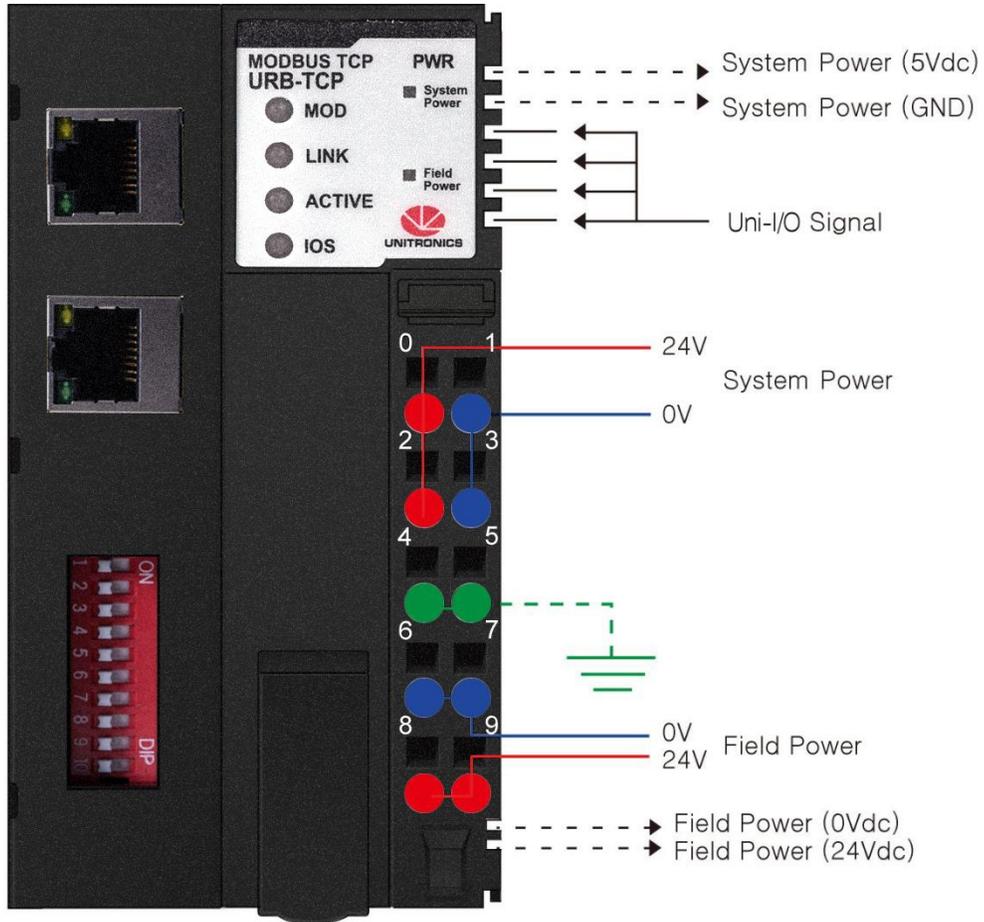

1. Line up the grooves on the module with the grooves on the adapter (if it is the first module) or on the adjacent module, and slide the module into place as shown in the next image.

## Specifications

### IP Address Setup using BOOTP Server

The URB adapter IP defaults are:

Default IP: 192.168.100.100

Subnet mask: 255.255.255.0

**Note** that on the adapter, there is a sticker showing its MAC address.

### Editing the IP defaults

There are two methods of changing the IP address:

- Via UniLogic's BOOTP Server  
This is a utility accessible via the UniLogic ribbon
- Via DIP switch  
These are physical switches on the adapter

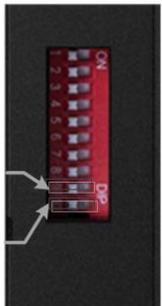

### Selecting the IP Configuration Method

To enable the selected method, you must raise the appropriate DIP switch on the adapter. By factory default, the adapter is supplied with all switches down.

- Raise #9 to set IP via BOOTP Server:
  - Enables the adapter BOOTP/DHCP.
  - After power up, the adapter will send up to 20 consecutive BOOTP/DHCP request messages, one for every 2 seconds.
  - In case that the BOOTP/DHCP server does not respond, the Adapter applies the latest saved IP address.
- Raise #10 to set IP via DIP switch:  
You can then set the IP according to the description in the next table.

## Configuring IP using Unitronics BOOTP Server

Before you can set the IP address of the Remote IO adaptor via Unitronics BOOTP Server, you must raise DIP #9 (check that #10 is down)

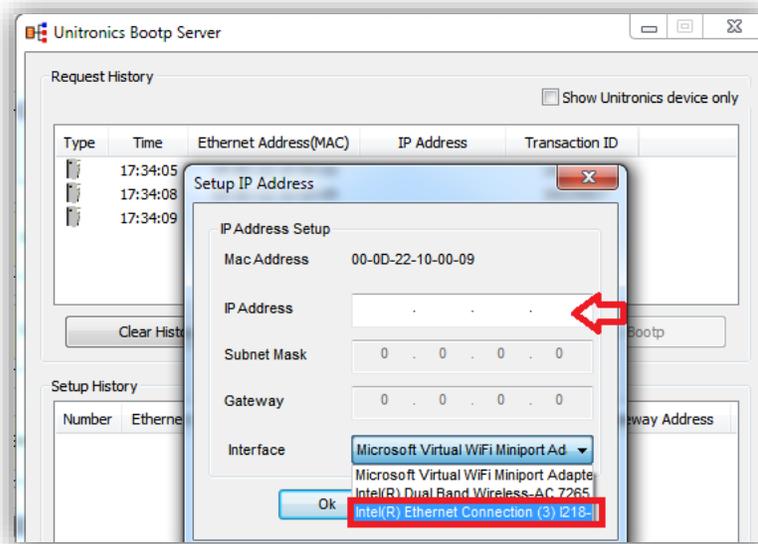

1. Power OFF the URB adapter.
2. Raise DIP switch #9 to enable DHCP / BOOTP.
3. In UniLogic, in the Solution Explorer, select the adapter; the ribbon will open the tab URB Remote I/O.
4. On the ribbon, click on Run BOOTP Server to open the utility.

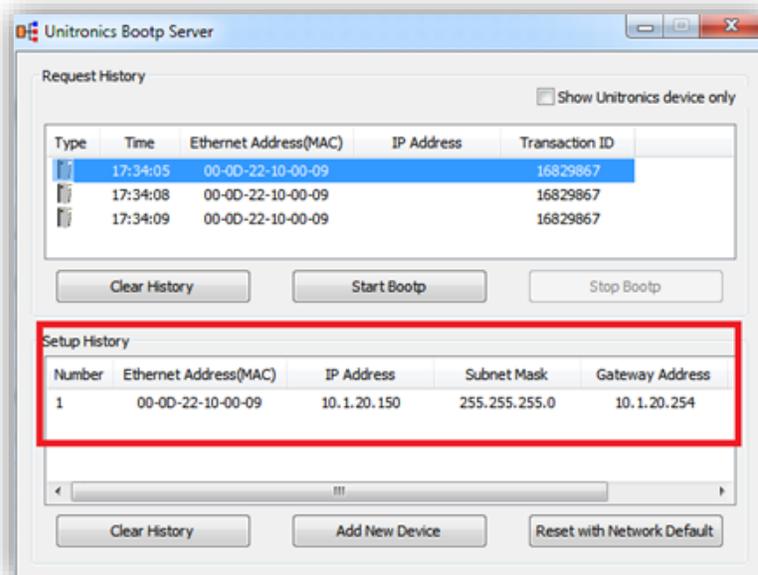

5. Click Start BootP in the **Unitronics** BOOTP Server; the upper section displays Ethernet devices that are in the network.

6. Power ON the URB adapter.
7. Locate the adapter's MAC address and double-click on the row.
8. Enter the required IP address and select your PC Network card.

9. Click Ok. Now you should see the device in the bottom window including the IP address.

10. Power cycle the adapter; turn it off and on.

11. Use Ping from command line to check that the IP address is replying.

```

Administrator: C:\windows\system32\cmd.exe - ping 10.1.20.150

C:\>ping 10.1.20.150

Pinging 10.1.20.150 with 32 bytes of data:
Reply from 10.1.20.150: bytes=32 time=1ms TTL=255
Reply from 10.1.20.150: bytes=32 time<1ms TTL=255
Reply from 10.1.20.150: bytes=32 time<1ms TTL=255

```

12. If the adapter replies successfully, then power off the adapter (URB-TCP) and lower DIP switch #9 (set to OFF).

13. Configure the adapter and IO modules in UniLogic and test.

**IP Address Setup using BOOTP Server**

The URB adapter IP defaults are:

Default IP: 192.168.100.100

Subnet mask: 255.255.255.0

**Note** that on the adapter, there is a sticker showing its MAC address.

**Editing the IP defaults**

There are two methods of changing the IP address:

- Via UniLogic’s BOOTP Server  
This is a utility accessible via the UniLogic ribbon
- Via DIP switch  
These are physical switches on the adapter

**Selecting the IP Configuration Method**

To enable the selected method, you must raise the appropriate DIP switch on the adapter. By factory default, the adapter is supplied with all switches down.

- Raise #9 to set IP via BOOTP Server:
  - Enables the adapter BOOTP/DHCP.
  - After power up, the adapter will send up to 20 consecutive BOOTP/DHCP request messages, one for every 2 seconds.
  - In case that the BOOTP/DHCP server does not respond, the Adapter applies the latest saved IP address.
- Raise #10 to set IP via DIP switch:  
You can then set the IP according to the description in the next table.

**URB Adapter DIP Switches**

## Configuring IP using Unitronics BOOTP Server

Before you can set the IP address of the Remote IO adaptor via Unitronics BOOTP Server, you must raise DIP #9 (check that #10 is down)

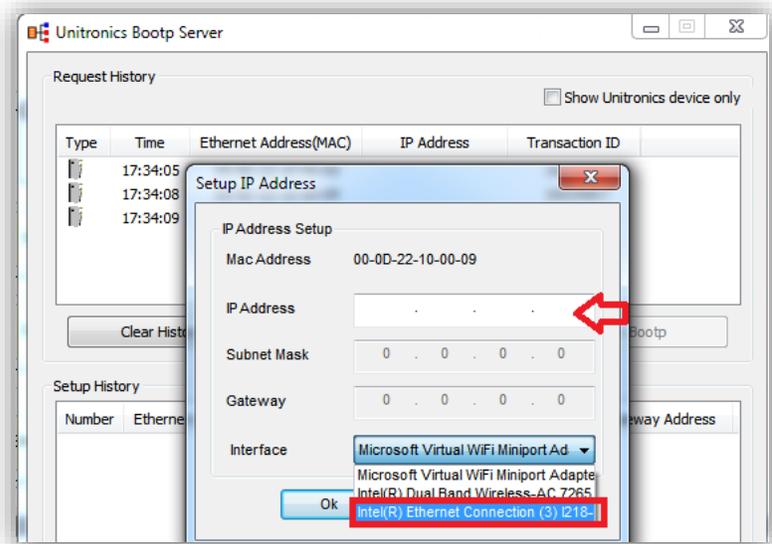

14. Power OFF the URB adapter.
15. Raise DIP switch #9 to enable DHCP / BOOTP.
16. In UniLogic, in the Solution Explorer, select the adapter; the ribbon will open the tab URB Remote I/O.
17. On the ribbon, click on Run BOOTP Server to open the utility.

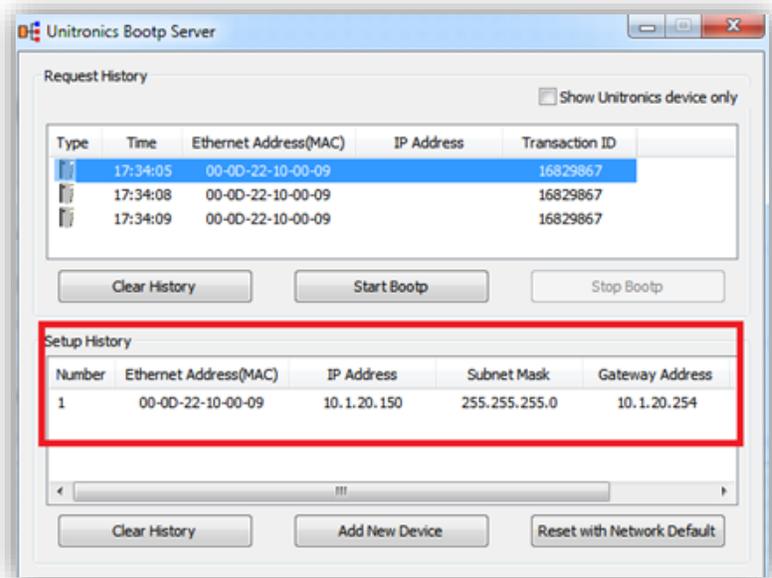

18. Click Start BootP in the **Unitronics** BOOTP Server; the upper section displays Ethernet devices that are in the network.

19. Power ON the URB adapter.
20. Locate the adapter's MAC address and double-click on the row.
21. Enter the required IP address and select your PC Network card.

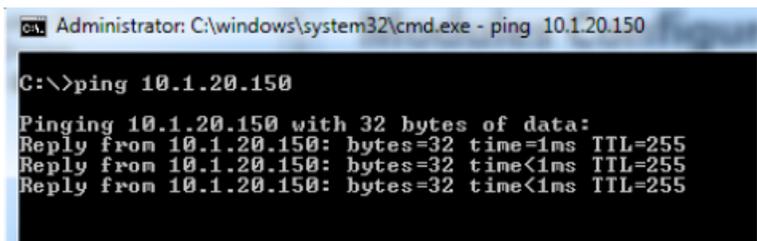

22. Click Ok. Now you should see the device in the bottom window including the IP address.

23. Power cycle the adapter; turn it off and on.

24. Use Ping from command line to check that the IP address is replying.

25. If the adapter replies successfully, then power off the adapter (URB-TCP) and lower DIP switch #9 (set to OFF).

26. Configure the adapter and IO modules in UniLogic and test.

\* Operating temperature

-40°C to 70°C (-40°F to 158°F) temperature range specification can be guaranteed under the following conditions.

- Load Resistance : Min 100Ω, Max 250Ω

- Otherwise, temperature specification can be guranteed with -40°C, 60°C (-40°F to 140°F).

### Usage

- URP-PS24V is system internal power expansion module.
- The URB-TCP network adapter system supplies a current of 1.5A If your system current requirements exceed 1.5A, add a power supply such as the URP-PS24V.
- Position the power supply directly before the first module that will cause the requirement to exceed 1.5A, as shown in the example below.
