

CONFIGURATION – INTEGRATION IPC-SYSTEMS

You need an industrial PC equipped according to your requirements? We will help you to assemble the most suitable components for your application and ensure the compatibility of the components used. We build your IPC exactly according to your specifications and, after installing the desired operating system, we subject the PC to an extensive final test.

INTEGRATION IPC-SYSTEMS

INTEGRATION IPC-SYSTEMS

DESCRIPTION

INDUSTRIAL-PC SYSTEMS

We build your IPC exactly according to your specifications and, after installing the preferred operating system, we subject the PC to an extensive final test.

YOUR ADDED VALUE

- > System adapted to your wishes
- > No installation effort
- > Functional safety

BASISSYSTEM

You can choose either one of our predefined standard industrial PC systems, where you can adjust the configuration at any time. Or you select another suitable basic system from our extensive range, which is then equipped with the features you require.

EQUIPMENT

You select the components necessary for your application. From the processor to the main memory and data storage as well as other components and equipment features.

We offer you an extensive selection of components and will be happy to advise you on which equipment is best for your application.

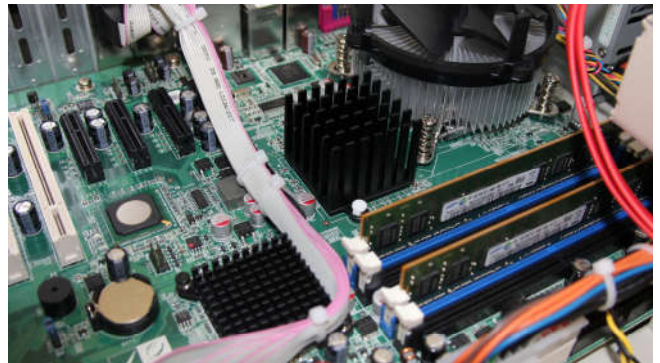

SPECIFIC COMPONENTS

If we do not have specific components in our range that are required for your application, we will be happy to procure them for you and add them directly to the production bill of materials so that you do not have to carry out any additional procurement and installation.

OWN ARTICLE NUMBER

Your individual industrial PC system is then managed by Spectra with its own article number in the ERP system. This enables efficient revision management and simplifies reordering.

To ensure consistent product quality for you, all internal work instructions are also managed under the article number.
